Covid-19 and the Workplace
What is the research telling us so far?

Stephen Bevan, Institute for Employment Studies
Topics for Today

- Wellbeing in different employee groups
- The IES WfH Wellbeing Survey
- Job quality, management & wellbeing
- Evidence gaps & challenges
- Some ongoing IES research
Wellbeing During Covid-19

- Key workers: PPE, risk assessment, BAME employees, mental health, trauma, burnout & ‘moral injury’
- Vulnerable groups: BAME workers, older workers, those living with obesity & other high-risk comorbidities
- Employees working from home: physical & emotional wellbeing, lifestyle factors, management, culture, communications & work-life balance
- Workforce health as a ‘business continuity’ challenge
Homeworking & Wellbeing

- Millions of workers have been WfH since the start of the ‘lockdown’ — biggest & quickest mass shift in working patterns ever
- Pre-COVID19, only around 7% of U.S. workers had the option to regularly work from home (12% in the UK)
- How have the physical & emotional health of workers been affected by WfH & what are the lessons for employers post-lockdown?
- Important not to over-medicalise
The IES Survey

- IES was established in 1969 & is a not-for-profit applied research organisation focusing on labour market policy, HRM & wellbeing
- The IES Working at Home Wellbeing Survey has been tracking wellbeing since the start of the UK ‘lockdown’ in March
- Used the WHO5 Index of mental wellbeing
- We have data from over 850 respondents
- All data here statistically significant
Respondent Profile
Survey Respondents

- 70% WfH only because of COVID19
- 70% female, mean age 46
- Mainly white collar, working for larger service sector or public admin. employers
- 42% share a workspace with another working adult
- 33% have children & 16% have eldercare
- 46% manage others
- 60% working longer than contracted
- 85% have work IT
- 73% have access to OH & 64% to EAP
- 25% say employer has done a risk assessment
Physical Health
Aches, pain & strain

- Early responses showed big ‘spike’ in MSK pain (eg 50-60%) – now lower
- Still more neck pain than ‘normal’ (37%), back pain (37%) & shoulder pain (32%)
- Eye strain (34%) and headaches/migraine (26%)

- Similar increases in:
  - chest pain
  - leg cramps
  - heartburn & indigestion

- Initial increases in pain have declined, but remain a challenge for at least 1 in 4
- Lower among those reporting a risk assessment
Physical Health During Lockdown

Source: Bajorek, Mason & Bevan, 2020
Lifestyle, Sleep, Exercise & Diet
Lifestyle & Pressure

- Almost half (44%) report losing sleep due to worry & 43% report more fatigue than usual
- 1 in 4 say alcohol consumption is up
- 60% worry they exercise too little
- One third say they eat unhealthily
- 33% say work pressure is too much
- 48% don’t have enough time to get their work done
Mental Wellbeing
How is Mental Health Faring? (1)

- The WHO5 Index is an internationally validated measure of mental wellbeing.
- In our sample, younger workers had lower scores & this group had more concerns about finance, housing, job security, isolation etc.
- The mental health of long-term homeworkers (pre-COVID19) was much better than those new to ‘lockdown’.
Mental Health Worse Among the Young

Source: Bajorek, Mason & Bevan, 2020
Better mental health among those who:

- Are committed to/engaged with their employer
- Derive satisfaction from work and have autonomy & control over what they do
- Are content with work-life balance
- Feel supported & motivated to WfH
- Have more frequent contact with their boss
- Have fewer physical health problems
- Intend to stay with their employer
Physical & Mental Health are Linked

Source: Bajorek, Mason & Bevan, 2020
Work-Life Balance, Communication & Morale
Good Work IS Good for Wellbeing

- Being trusted to work remotely & feeling involved in decision-making (voice)
- Variety, control, feeling valued & a having a sense of accomplishment from work
- Managing the work/life boundaries
- Contact with boss & team members
Satisfaction with WfH – Working Hours Compared to Contracted Hours

Weekly hours worked compared with contracted hours

- Organisational Commitment
- Satisfaction with working from home
- Good work-life balance
- Job Satisfaction
What more can these data tell us?
Further Data ‘Mining’?

- Can track changes in self-reported health weekly since lockdown
- Focused analysis on wellbeing of managers – the ‘squeezed middle’
- Multivariate analysis to identify the most important drivers of mental wellbeing
- Comparisons with ‘mirror’ surveys internationally (India, ROI, Brazil, UAE)
Drivers of Mental Health in Homeworkers?

**Independent Variables**
- Organisational Commitment
- Job Satisfaction
- Positive WLB (Work-Life Balance)
- Positive WFH (Work-From-Home)
- Physical Wellbeing

**Moderating Variables**
- Age
- Gender
- New to WFH
- Parent
- Eldercare
- Manager
- Hours
- Contact
- H&S Support

**Dependent Variable**
- Mental Wellbeing (WHO5)
Challenges & Evidence Gaps
## Challenges & Gaps

Questions for Key Players

- Are senior leaders more convinced now that Wellbeing should be a strategic priority? Beyond a ‘business continuity’ risk?
- Can OH/HR grasp the opportunity to ‘mainstream’ workforce health or will it revert to being about employee benefits, fruit & Pilates?
- What HR processes need to be reassessed in the light of Covid-19?
- Do policy ‘silos’ present a risk to effective & sustained improvements in outcomes?
Current IES Projects

ESRC-Funded project with Southampton Business School & half the Sky. Case studies and surveys in Local Government and the Legal profession to examine how work organisation, culture, WLB and wellbeing are managed over a year post-lockdown.

Qualitative research with 20 older workers who are living with chronic & fluctuating health conditions. Examining how they have managed health & work before, during & after Covid-19. Using Interviews and journals.
